Surface Matters by Dorby comprises of layers of specially selected paper, impregnated with melamine and phenolic resins pressed and hardened under heat and pressure. The process ensures strong bonding, resistance to boiling water and chemicals, and increases dimensional stability. Surface protection through special treatment renders all Surface Matters by Dorby products. It is suitable for a wide range of applications such as wall lining, column claddings, doors, shelves, tabletops, worktops, counters, vanity units, cubicles, lift linings, store fittings, displays, check out desks etc.

Cutting a laminate sheet at an angle of 90° leads to the development of cracks in the corner after pasting. Therefore, it is advisable to avoid cutting it at an angle of 90°. Bonding of laminate under high humidity, plywood with high moisture content, and uneven surfaces, inferior quality adhesive and insufficient pressure may lead to delamination/ air bubbles in between ply and laminates.
