- | | |
|----------|---|
| 1 | Microphone for calls |
| 2 | USB Charging Port |
| 3 | Previous Song/Volume Down |
| 4 | Multifunction button (change frequency, pick up/end calls & change music source) |
| 5 | Next Song/Volume Up |
| 6 | USB Charging Port/USB Playback |
| 7 | LED Display |
| 8 | Micro SD card Playback (at rear) |

Initial Setup

**Plug the Socket Rocket into
your car's lighter socket and
start your car**

**Hold down the right arrow
until the screen displays
"U30." This brings the device
volume up**

U30

Initial Setup (cont.)

In your phone's Bluetooth settings, connect to the Socket Rocket or HY87, whichever displays first

Turn your car radio to FM and find a vacant (unoccupied) channel, such as 100.0 FM. A vacant channel means there is NO audio playing on it – you will simply hear radio static.

DO NOT USE NORMAL LISTENING STATIONS SUCH AS ABC RADIO

Initial Setup (cont.)

Hold down the green button and use the arrows to match the LED display to the exact radio station frequency that you just tuned your car to (e.g. 100.0 FM)

Once you've followed these steps, ensure your phone and car radio volume is loud enough

Initial Setup (cont.)

All of your phone's audio, including music and calls, will now play through your car speakers!

You're all set up!

No sound! Or too quiet!

Your Socket Rocket volume is most likely on low or off

How do I change this?

Hold down the right arrow and bring the volume to U30

Ensure your phone and stereo volume are also turned up

If you still can't hear anything, then the sound isn't the issue. Refer to other pages.

← U30

It sounds very static-y

***You may need to play around
with the 3 volumes & the
station you are using***

**If you're trying to play your
music through a station that is
a normal listening station,
such as ABC Radio, it will NOT
work properly**

**You can change the station
you're using easily. Refer to
page 5-6**

**In some cases, you will need to
play around with increasing
and decreasing the car, phone
and/or Socket Rocket volume
to find the sweet spot for clear,
static-free music**

My phone won't connect!

If you can't find the Socket Rocket in your Bluetooth settings, try these steps

Unplug the Socket Rocket

Restart your phone/device

Plug the Socket Rocket back in

Visit your Bluetooth settings and connect to the device

If the Socket Rocket's LED display shows nothing when you plug it in, contact us

Callers can't hear me!

The Socket Rocket has an in-built microphone that can be used for phone calls

Ensure that your phone has NOT defaulted to use it's microphone instead of the Socket Rocket's microphone

Also consider the placement of the Socket Rocket in your car. If it is hidden away and in an enclosed space, it may be harder for callers to hear you

This problem can be fixed with an extension of the cigarette lighter socket which can be found online for around \$15

**Need another
Socket Rocket?**

**\$5 OFF
